General Assembly Guidelines

1. Read the instructions carefully before beginning the assembly process to ensure proper assembly of this product. Please open and inspect the contents of box(es) to see that all parts and hardware are included.

2. Tools Required

Phillips Screwdriver +

Hammer

Electric Screwdriver +
Torque set to 3-5

3. Understanding How the Cam Fastener Works

Screw cam bolts flush as illustrated.

Press cam into hole until flush with surface. The arrow direction must be in the direction of the hole.

Insert bolt through pre-drilled hole in edge of panel.

Turn clockwise to lock cam with bolt.

Tip: place a small bit of WD-40 or similar lubricant into the pre-installed cam bolt holes to help the cam bolts screw in better.

4. **Glue** provided is to secure wood dowels in place and is optional. If glue is used during assembly, locate the appropriate hole for the dowel, place a small amount of glue in the hole and insert the dowel. Wipe away excess glue immediately. It is not necessary to glue the other end of the dowel when attaching to other parts.

Use and Care Your cabinet normally requires a minimum amount of maintenance; however, the following points are worth noting:

Cleaning - To remove marks and enhance the surface, wipe with a gentle all-purpose cleanser. **DO NOT** use ammonia-based, harsh chemicals or abrasive cleaning agents. Wipe dry immediately.

Electrical and Hydraulic Lifts - Require annual lubrication with WD-40 or similar lubricant.
